New England Systems

Intelligent People, Powerful Tools, Successful Customers

Netezza provides a family of data warehouse appliances and software products that allow you to easily deploy high-performance data analytics across your entire enterprise.

NETEZZA TwinFin®

Netezza®

Data Warehouse Appliances

NES is pleased to offer Netezza's ground-breaking, purpose-built, standard-based data warehouse appliances, Skimmer® and TwinFin®. These appliances architecturally integrate database, server and storage into a single, easy to manage system.

Organizations are using Netezza appliances to:

- Exploit the power and simplicity of a purpose-built appliance for high speed metrics
- Improve the quality and timeliness of business intelligence
- Query data at lightning speed efficiently and economically

Netezza's Approach

Netezza appliances prove that data warehousing doesn't have to be complicated. Instead of spending time making data warehouses run efficiently, Netezza users deploy purpose-built data warehouse appliances that solve business problems. Netezza data warehouse appliances are installed quickly and easily, integrate with your preferred ETL and BI tools and can be largely left alone to get on with the job.

The fourth generation of Netezza appliances, The Netezza TwinFin™ data warehouse appliance, is the first in a family of four appliances which comprises a high-capacity system that scales to five petabytes, a memory-intensive system for extreme performance and an entry level system.

The Netezza data warehouse appliance is proven to provide true business value to customers very quickly with minimal investments of money, time, and effort.

Innovation

Netezza pioneered the data warehouse appliance market in 2003 with the Netezza Performance Server (NPS), the world's first data warehouse appliance. Netezza appliances architecturally integrate database, server and storage into a single, easy to manage system that requires minimal set-up and ongoing administration.

Netezza®

Data Warehouse Appliances

Performance

Netezza appliances deliver high performance out of the box, with no indexing or tuning required. As an appliance, all of the integration of hardware, software and storage is done for you, leading to shorter deployment cycles and faster time to value for Business Analytics.

Simplicity

Netezza simplifies business analytics dramatically by consolidating all analytic activity in the appliance, right where the data resides. Netezza eliminates complexity at every step so you can redirect valuable resources to the initiatives that will actually impact the bottom line.

i-Class Technology

Moving analytics to TwinFin is straightforward with Netezza's i-Class technology. i-Class supports a breadth of analytic tools and offers powerful engines and analytic libraries that execute analytics in parallel.

NETEZZA TwinFin®

Netezza Data Warehousing Products

TwinFin®

Netezza TwinFin is designed for rapid analysis of data volumes scaling into the petabytes, delivering 10-100x performance improvements at one third the cost of other options available from traditional database vendors. TwinFin is also the first data warehouse appliance to offer built-in data compliance and security of sensitive data. With growing data volumes, it provides that critical visibility into who is accessing information and why it is being accessed.

NETEZZA Skimmer®

Skimmer®

The Netezza Skimmer is an extremely versatile appliance to power small to mid-sized data warehouses, and can serve as an "edge" appliance in larger hub and spoke deployments or as a test and development system in conjunction with its enterprise-class high-performance family member – the Netezza TwinFin.
